

1 ABSTRACT OF THE DISCLOSURE

2  
3 An embodiment of the invention includes, parsing a source code, performing a  
4 plurality of optimizations on the parsed code, generating a plurality of configuration  
5 instruction sets based on the optimized source code and automatically selecting one of the  
6 plurality of generated configuration instruction sets according to a user defined criteria,  
7 the selected configuration instruction set being used to configure hardware.
